WAVCASH

Royalty intelligence and payment infrastructure for music rights holders. Built for Africa and Latin America.

wav.cash

THE PROBLEM

Music rights holders in the fastest-growing markets are operating completely blind.

- Royalties fragmented across five or more platforms, each with separate dashboards and payment schedules
- No way to verify whether payments are accurate or complete
- CMO registration broken, inaccessible, or in some markets actively corrupt
- Payments take two to six months to arrive
- Converting to local currency costs three to five percent through traditional banking
- Split agreements live in WhatsApp messages and verbal promises

---

Rights holders do not know what they are owed. They know what they were paid, only after the fact, and only sometimes.

DOCUMENTED FAILURES

These are not outliers. They are the norm.

KENYA, 2024

Artist Bien-Aime Baraza received $11.61 from MCSK for millions of streams. He refused to collect it. There was no explanation of how it was calculated and no way to verify whether it was correct.

NIGERIA, JANUARY 2026

The Nigerian Copyright Commission attempted to distribute over one billion naira in private copy levies. Major labels objected publicly. The IFPI wrote warning of irreversible prejudice to rights holders. The money remains undistributed.

SOUTH AFRICA

SAMRO unlocked R22 million in unclaimed royalties simply by updating bank account records. That money had been sitting in the system, uncollected, because rights holders did not know it existed.

THE SOLUTION

WavCash: royalty intelligence with instant local payouts.

Aggregate

All royalty sources unified in one dashboard. Every DSP, every distributor, every CMO, one view.

Verify

A real-time oracle calculates what rights holders should be earning before any payment arrives.

Detect

Automatic discrepancy detection flags when payouts do not match verified estimates. Missing money surfaces immediately.

Register

Guided CMO registration. WavCash prepares the complete submission package. The rights holder submits directly.

Settle

Instant payouts via M-Pesa, PIX, Paystack, bank transfer, or USDC the moment royalties arrive.

Split

Permanent onchain agreements that establish who owns what before a song is released, with automatic redistribution when money arrives.

WHY NOW

The fastest-growing markets are the most underserved.

+22.6%

Sub-Saharan Africa recorded music revenue growth in 2024. Revenues surpassed $100 million for the first time.

IFPI Global Music Report 2025

+22.5%

Latin America recorded music revenue growth in 2024. Fifteenth consecutive year of growth. Brazil grew 21.7%, the fastest-growing top ten market globally.

IFPI Global Music Report 2025

The payment rails are ready. PIX covers 175 million users in Brazil. M-Pesa serves 34 million in Kenya. Paystack processes 20% of all online transactions in Nigeria. What is missing is the collection and intelligence layer connecting royalty income to these rails. That is what WavCash builds.

WHO WE SERVE

Every music rights holder, not only artists.

Independent Artists
Primary acquisition channel. Do not know what they are owed, cannot verify payouts, and have never registered with a CMO.

Producers and Beatmakers
Get flat fees with no backend. Made the beat for a song with five million streams and got paid once. Need onchain split agreements before release.

Songwriters and Composers
Unregistered with PROs. Missing mechanical and performance royalties that belong to them.

Session Musicians and Engineers
Credits missing from metadata. Not registered with any CMO. Played on hundreds of recordings, received zero ongoing royalties.

Small Labels and Managers
Reconciling multiple distributor statements in Google Sheets. Cannot compete on transparency. Losing artists to labels with better tools.

MARKET SIZE

550,000 rights holders. $1.6 billion in streaming revenue.

MARKET	EST. RIGHTS HOLDERS	2024 REVENUE	YOY GROWTH
Brazil (ECAD system)	323,000+	~$290M	+21.7%
South Africa	20,000-25,000	$82M total	+54%
Nigeria and Kenya	40,000+ est.	$38M (Spotify)	High
Argentina + rest of LATAM	140,000+ est.	Growing	+22.5%
Rest of Africa	30,000-50,000	Growing	+22.6%

250 labels at $75/mo — $225K ARR

10,000 rights holders at $12/mo — $1.44M ARR

THE CORE INSIGHT

The payment rails exist. The collection infrastructure does not.

PAYMENT INFRASTRUCTURE IS READY

M-Pesa, PIX, and Paystack can move money in seconds. These are not emerging technologies. They are mature, widely adopted infrastructure already processing billions of dollars in daily transaction volume.

COLLECTION INFRASTRUCTURE IS MISSING

There is no infrastructure that tells rights holders what they are owed, verifies they are being paid correctly, or aggregates earnings across the multiple systems where their money lives.

TRADITIONAL INFRASTRUCTURE DOESN'T FIT

Built for major labels with legal departments, US and EU markets with functioning CMOs, quarterly reporting, and bank wire payments. The fastest-growing markets need self-serve tools, real-time visibility, transparent split agreements, and instant settlement in the currency people actually use. WavCash is that layer.

BUSINESS MODEL

Subscriptions at MVP. Transaction fees in Phase 2.

TIER	ANNUAL BILLING	MONTHLY BILLING	SEATS
Basic	$6.99/mo	$9.99/mo	1
Premium	$11.99/mo	$14.99/mo	1
Enterprise (3-seat)	$45/mo	$55/mo	3
Enterprise (5-seat)	$75/mo	$85/mo	5

Distributor → local currency	0.5% + 2% FX
Distributor → USDC	0.5% only
CMO → virtual account	9.5% + 0.5%

$100 in royalties arrives. Settled in seconds. Rights holder receives $97.50 in naira, reais, shillings, or stablecoin.

COMPETITION

Nobody is building royalty intelligence for the fastest-growing music markets.

FACTOR	REPRTOIR	CLAIMY	AFRO SOUNDTRACK	WAVCASH
Target Market	Europe	France/UK	Africa	Africa/LATAM
Real-time oracle	No	No	No	Yes
Discrepancy detection	No	Retroactive	No	Yes
CMO registration guide	No	No	Yes (collection)	Yes
Onchain splits	No	No	No	Yes
M-Pesa / PIX / Paystack	No	No	No	Yes (Phase 2)
USDC settlement	No	No	No	Yes (Phase 2)
Artist-direct access	No	No	No	Yes

Claimy raised EUR 1.5M in October 2025 (clients include David Guetta and Celine Dion).

Their own framing: ~30% of music royalties fail to reach intended recipients, representing ~$15B lost globally. They have validated the thesis, but they only serve France and the UK.

Publishing admins such as Afro Soundtrack and Songtrust are collection partners, not competitors. The relationship is complementary by design.

GO-TO-MARKET

Build leverage at each stage.

PHASE 1: RIGHTS HOLDER DIRECT

Nigeria and South Africa

Free Royalty Sniffer as primary acquisition tool. Paste Spotify URL, see estimated royalties and missing money before creating an account. Viral loop: "I found $X I did not know I was owed."

Target: 5,000 rights holders in 6 months

PHASE 2: LABEL PARTNERSHIPS + PAYMENT RAILS

Nigeria, South Africa, Brazil

Enterprise tooling ships alongside virtual account infrastructure. Labels bring their entire roster into the payout system at once. Splits viral loop: every agreement notifies 2–5 new people.

Target: 50 active label accounts

PHASE 3: DISTRIBUTOR INTEGRATION

Kenya, Ghana expansion

Distributor OAuth replaces CSV upload. DistroKid first, then TuneCore. Kenya payment infrastructure activates. Ghana adds GHAMRO CMO integration.

Target: 25,000 rights holders

PHASE 4 ONWARD

Territory + financial products

Colombia, Argentina, Tanzania. Royalty advances, WavCash card, earnings-linked savings. Data intelligence, API licensing, track licensing marketplace.

TEAM

Ibukun "I.B" Oyewumi

FOUNDER

5+ years in the Nigerian music industry as a record producer, with millions of streams earning royalties. Building WavCash to solve a real problem for himself and thousands of his peers in Africa and LATAM.
